

MCQs - Session: "Introduction to Computer Hardware"

1. If we compare a computer to a human body, the processor is :
 - A - the brain,
 - B - the heart,
 - C - the legs.

2. The computer is equipped with a fan to :
 - A - dissipate the odors emitted by the electronic components when they heat up,
 - B - cooling the microprocessor,
 - C - to guarantee the comfort of the person using it.

3. RAM refers to a computer :
 - A- RAM,
 - B- the navigation bar,
 - C- the information flowing in the printed circuits.

4. A slot is a place for :
 - A- surfing the web,
 - B- plug in an expansion card or RAM sticks,
 - C- store computer equipment.

5. A conductive material is so called because in the computer :
 - A- he conducts-commands the operations to be carried out,
 - B- it conducts electricity,
 - C- it conducts the heat produced by the hard disk during operation.

6. The graphics card allows :
 - A- to draw with his fingers on the screen,
 - B- to convert visits from Internet users into views,
 - C- to display an image on the screen.

7. The hard disk can be connected to the computer with a cable:
 - A- SATA,
 - B- GAFA
 - C- SAFA

8. In microcomputing, a peripheral device refers to :
 - A- ancillary equipment,
 - B- an information highway,
 - C- a looped cable.

9. An external port is :
 - A- a place where Internet users can be received outside their home (for example, a cyber-café),
 - B- portable computer equipment (e.g., a tablet),
 - C- a socket to connect a peripheral.

10. *Random Access Memory* is an album by Daft Punk, so called because it refers in a computer to :
 - A- its RAM,
 - B- its battery,
 - C- its speed of execution.
